IMPORTANT SAFETY INSTRUCTIONS

SAVE THESE INSTRUCTIONS - This manual contains important instructions that should be followed during installation, operation, and maintenance of the product. Save this manual for future reference.

⚠ This is the safety alert symbol. When you see this symbol on your pump or in this manual, look for one of the following signal words and be alert to the potential for personal injury!

⚠ DANGER indicates a hazard which, if not avoided, will result in death or serious injury.

⚠ WARNING indicates a hazard which, if not avoided, could result in death or serious injury.

⚠ CAUTION indicates a hazard which, if not avoided, could result in minor or moderate injury.

NOTICE addresses practices not related to personal injury.

To avoid serious or fatal personal injury and possible property damage, carefully read and follow the safety instructions.

1. Install pump according to all code requirements.
2. Compare pump nameplate data with desired operating range.
3. Pump only liquids compatible with pump component materials (that is, liquids that will not attack the pump).
4. Make sure plumbing is adequate to handle system pressure.
5. Periodically perform maintenance inspection on pump and system components.
6. Wear safety glasses at all times when working on pumps.

California Proposition 65 Warning

⚠ WARNING This product and related accessories contain chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

Inspect the Shipment

The vertical multistage centrifugal inline pump has been carefully inspected and packaged to assure safe delivery. Inspect the pump and fittings and report to the carrier any items which are damaged or missing.

Confirm that you have the right pump:

PVMX3 – 15 1.25" FLG EPDM

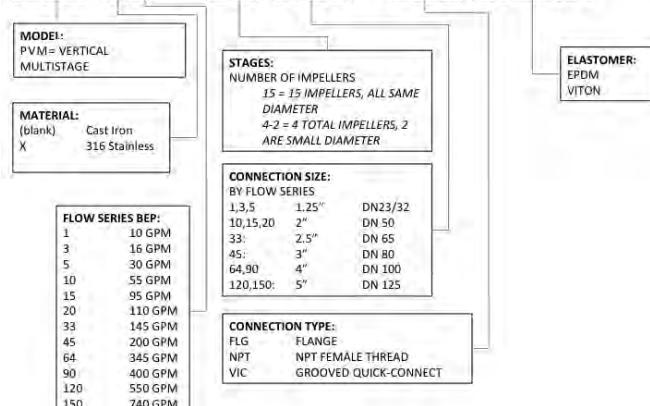

Figure 1 - Model Plate Information

Applications and Operating Ranges.

Aurora® multistage in-line centrifugal pumps are designed for liquid transfer, circulation, and pressure boosting of hot or cold clean water or other thin, non-explosive liquids, not containing solid particles or fibers, which will not chemically attack the pump materials.

Typical applications include:

- Municipal water supply and pressure boosting
- Boiler feed and condensate systems
- Cooling water systems
- Irrigation
- Fire fighting

Maximum Ambient Temperature 104° F(40° C)

Liquid Temperature Range. 5° F to 248° F
(-15° C to +120° C)

Maximum Permissible Operating Pressure

Flow Series 1 through 20 360 psi

Flow Series 33 through 150 435 psi

Maximum operating pressure = Inlet pressure +
maximum pump differential head

Electrical Data: See Motor Nameplate

Dimensions and Port-to-Port

Lengths : See pages 20-51

INSTALLATION

WARNING Risk of electric shock. Can shock, burn or kill. Ground pump motor correctly before connecting to power supply, per article 250-80 of the National Electrical Code (NEC) in the U.S., or the Canadian Electrical Code (CEC), as applicable.

Location

Locate pump in a dry, well ventilated area, not subject to freezing or extreme variations in temperature.

Mount pump a minimum of 6" from any obstruction or hot surface. Install the pump with the motor shaft vertical. Make sure that an adequate supply of cool air reaches the motor cooling fan. Maximum ambient air temperature is 104° F (40° C).

For open systems requiring suction lift, locate the pump as close to the water source as possible.

Foundation

Foundation should be concrete or a similarly rigid foundation to provide a secure, stable mounting base for the pump.

Secure pump to foundation using all bolt holes. Refer to pages 19-51 for bolt plate dimensions. Be sure that all four pads on the base are properly supported.

Shim pump base to make sure that pump is level.

Piping

WARNING Risk of explosion and scalding. Do not run pump with discharge valve closed; the water in the pump may boil, with risk of explosion and steam burns to anyone near.

If there is any danger of the pump running against a closed discharge valve, install a pressure relief or by-pass valve in the discharge pipe to allow for minimum liquid flow through the pump. Minimum liquid flow through the pump is needed for cooling and lubrication of the pump (See Table I). Run the bypass/relief valve and discharge pipe to a floor drain or a tank for collection.

Suction pipe should be adequately sized (See Table II) and run as straight and as short as possible to keep friction losses to a minimum. Pipes, valves, and fittings must have a pressure rating equal to or greater than the maximum system pressure.

Pressure check the discharge piping as required by codes or local regulations.

"Inlet" and "Outlet" are marked on the pump base to show the direction of the liquid flow through the pump.

Install anti-vibration mountings on either side of the pump if a minimum noise level is desired.

Install isolation valves in both inlet and outlet pipes near the pump (see Figure 2). This allows for removal of pump for service without draining the system and isolation of the pump in case of a flooded suction condition.

Table I – Minimum Pumping Rates

Flow Series	Minimum Pumping Rate
PVM(X)1	1.0 GPM
PVM(X)3	6.5 GPM
PVM(X)5	13 GPM
PVM(X)10	25 GPM
PVM(X)15	45 GPM
PVM(X)20	50 GPM
PVM(X)33	80 GPM

Table II – Minimum Suction Pipe Sizes

Flow Series	Minimum Nominal Suction Pipe Size
PVM(X)1	
PVM(X)3	1.25 inches
PVM(X)5	
PVM(X)10	
PVM(X)15	2 inches
PVM(X)20	
PVM(X)33	2.5 inches

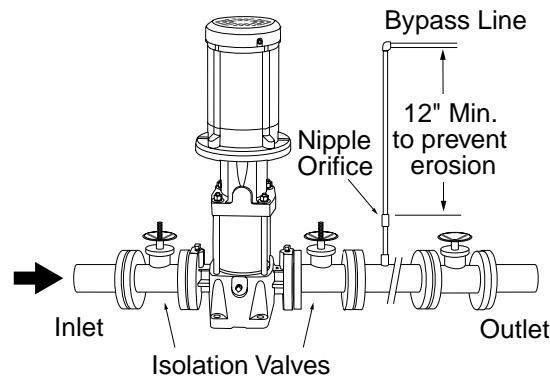

Figure 2 - Bypass required if pump might operate with discharge valve closed. See Table I for minimum required flow through pump to prevent overheating and to ensure lubrication.

If the system pressure is greater than the pump's maximum inlet pressure the limits of the pump can be exceeded if the discharge pressure backs up to the inlet side of the pump. Installation of a check valve in the discharge pipe is recommended to prevent this condition.

Make sure, especially on the inlet side of the pump, that there are no airlocks in the system. See Figure 3 for correct pipe work to avoid airlocks. The suction pipe should be level or slightly rising.

Support all piping independently of the pump so the weight of the piping system does not strain the pump case. Make sure that the expansion and contraction of the piping system from temperature variations cannot put a strain on the pump.

If the system or pump must be drained periodically (especially if the discharge pipe is horizontal or slopes downward away from the pump), install a loop and vacuum valve as shown in Figure 4 to protect the pump

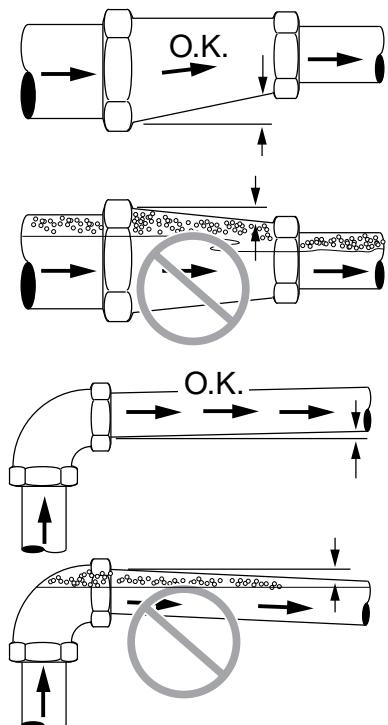

Figure 3 - Install Pipe Correctly to Prevent Air Locks

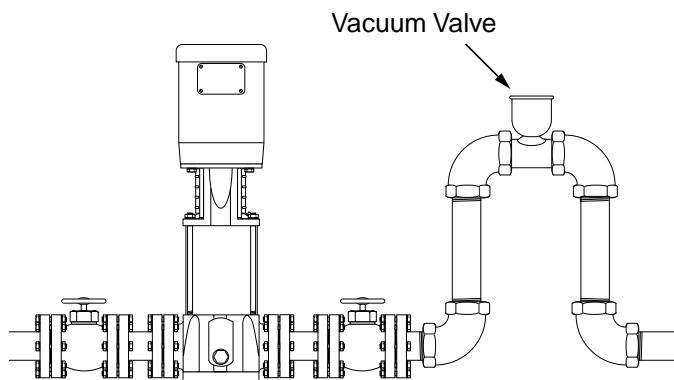

Figure 4 - Loop and Vacuum Valve Installation

against running dry. The highest point of the loop should be at least as high as the lowest point of the motor. This loop/valve combination will allow the pump and the system to be drained independently of one another.

ELECTRICAL

WARNING Risk of electric shock. Can shock, burn or kill. All electrical work should be performed by a qualified electrician in accordance with the National Electrical Code and all local codes and regulations. Make sure that the motor voltage, phase, and frequency match the incoming electrical supply. The proper operating voltage and other electrical information can be found on the motor nameplate. These motors are designed to run up to $\pm 10\%$ of the nameplate-rated voltage. The wiring connection diagram can be found on either a plate attached to the motor or on a diagram inside the terminal box cover.

- If voltage variations are greater than $\pm 10\%$ do not operate the pump.
- Incorrect voltage can cause fire or serious damage to the motor and voids warranty.
- Ground the pump motor correctly before connecting it to the power supply.
- Follow the wiring instructions when connecting the motor to the power lines.

Position of Terminal Box

To turn the motor so that the terminal box faces the right direction, proceed as follows:

1. Disconnect the power to the pump motor.
2. Remove the coupling guards (use a screwdriver).
3. Remove the couplings.
4. Remove the bolts that fasten the motor to the pump.
5. Turn the motor to the required position (in quarter-turn increments).
6. Follow steps 10–18 under *Motor Replacement*.

Field Wiring

All wiring connections and wiring sizes must meet National Electrical Code and local requirements.

Motor Protection

See the motor nameplate for electrical connection/wiring diagram.

Aurora pumps must be used with the proper size and type of motor starter to ensure protection against damage from low voltage, phase failure, current imbalances, and overloads. The overload should be sized to trip at the full-load current rating of the motor.

OPERATION

Priming

WARNING Risk of explosion and scalding. Do not run the pump with the discharge valve closed; the water in the pump may boil, causing risk of explosion and steam burns to anyone nearby.

WARNING Risk of electric shock. Can shock, burn or kill. Disconnect all power to the pump before servicing or working on the pump. Make sure that the power is locked out and that the pump cannot be accidentally started.

Operation of closed systems or open systems with the liquid level above the pump priming plug:

1. Close the discharge isolating valve and loosen the needle valve located in the assembly in the pump head (Figure 5). Do not remove the needle valve.

CAUTION Risk of flooding. Can cause personal injury and/or property damage. Watch the direction of the priming plug and make sure that the liquid escaping from it does not injure persons nearby or damage the motor or other components. In hot water installations, pay particular attention to the risk of injury from scalding hot water.

2. Slowly open the isolation valve in the suction pipe until a steady stream of liquid runs out the vent in the priming port.
3. Tighten needle valve to 25 inch-pounds. Completely open isolation valves.

NOTICE: Please turn to Starting before proceeding any further.

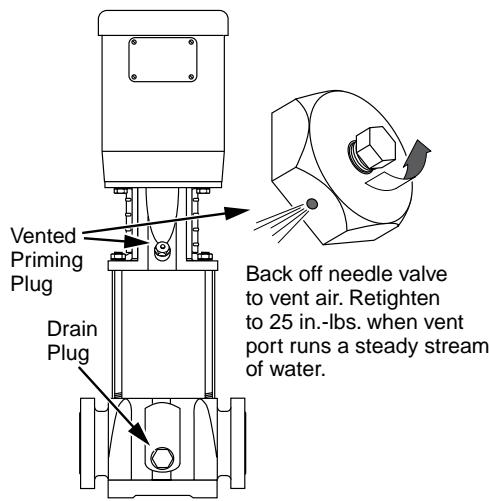

Figure 5 - Priming and Drain Plugs

Operation of open systems with the liquid level below the top of the pump:

NOTICE: The suction pipe requires a check valve or isolation valve.

1. Close the discharge isolation valve.
2. Remove the vented priming plug.
3. Pour liquid through the priming port until the suction pipe and the pump are completely filled with liquid.
4. Replace the vented priming plug and tighten it securely.
5. Repeat steps 1-4 until the pump is primed.

NOTICE: Please turn to Starting before proceeding any further.

Checking Direction of Rotation

NOTICE: Do not disconnect the motor from the shaft to check the direction of rotation. If you remove the coupling, then you must adjust the shaft position when you reinstall it. This must be done before starting the pump.

Arrows on the pump head show the correct direction of rotation. When seen from the motor fan, the pump should rotate counterclockwise (↙). For pump motors without a fan remove one of the coupling guards and look at the coupling to determine the direction of rotation. Turn off the pump and replace coupling guard.

NOTICE: Do not check the direction of rotation until the pump has been filled with liquid. See "Priming", at left and above.

1. Switch power off.
2. Remove the coupling guard and rotate the pump shaft to be certain it can turn freely. Replace the coupling guard.
3. Verify that the electrical connections are in accordance with the wiring diagram on the motor.
4. If the fan is visible, turn on and off to verify rotation.
5. To reverse the direction of rotation, first switch OFF the power supply.
6. On three-phase motors, switch 2 of the 3 power leads on the load side of the starter. On single-phase motors, see the connection diagram on the motor nameplate. Change the wiring as indicated.

WARNING Risk of electric shock. Can shock, burn or kill. Ground the pump motor correctly before connecting to power supply per article 250-80 of National Electrical Code (NEC) in the U.S., or the Canadian Electrical Code (CEC), as applicable.

7. Switch on the power supply and recheck the direction of motor rotation.

Starting

1. If a suction line isolation valve has been installed, check to be sure that it is completely opened.
2. For initial starting, the isolation valve in the discharge pipe should be almost closed.
3. Start the pump.
4. When the piping system has been filled with liquid, slowly open the discharge isolation valve until it is completely open. Opening the valve too fast may result in water hammer in the discharge pipe. If the pump or system start to rattle, the pump is cavitating; to avoid damage to the pump, reduce the flow through the discharge isolation valve until the rattling stops. If this does not give adequate flow for your installation, call your installer or system designer.
5. Record the voltage and amperage of the motor. Adjust the motor overloads if required.
6. If pressure gauges have been installed, check and record operating pressures.
7. Check all controls for proper operation.

Motor Bearings

For the greasing schedule and greasing procedure of the motor bearings follow the motor manufacturers recommendations.

MAINTENANCE

Motor Replacement

The reference numbers [shown as (11) or (88)] refer to the exploded views, Figures 10-13. See the appropriate exploded view for your model series.

WARNING Risk of electric shock. Can shock, burn or kill. Disconnect all power to the pump before servicing or working on pump. Make sure that power is locked out and that pump cannot be accidentally started.

1. Disconnect the power to the pump motor.
2. Close the nearest suction and discharge valves.
3. Remove the coupling guards (54).
4. Remove the socket head screws (73) and the coupling halves (44) from the shaft (81). See Figure 6.
NOTICE: Socket head screws are metric. See Table III for specific metric driver sizes.
5. If your pump has a shaft pin (72), remove it.
6. Remove the motor bolts (74/92) and flatwashers that hold the motor and the motor stool (36/53) together.
7. Pull the old motor up and off of the motor bracket.
NOTICE: Make a note of the orientation of the conduit box on the motor.
8. Thoroughly clean the surfaces of the mounting flanges on the new motor and the pump end.
9. Install the new motor on the pump with the conduit box in the desired position.
10. Lubricate the motor bolts (74/92) with oil.

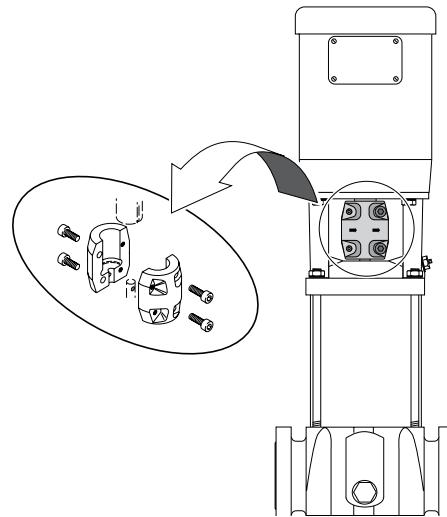

Figure 6 - Remove the Socket Head Screws and the Coupling Halves

11. Reinstall the flatwashers and motor bolts (74/92) that hold the motor and the motor stool (36/53) together, then tighten the bolts evenly and diagonally. See Table III for torque specifications.
12. PVM(X)1-PVM(X)20: Reinstall the shaft pin (72) if your pump has one. Raise the height of the pump shaft by using the shaft pin (72) as a lift point (you may have to put a block under the pin and lift with a flat screwdriver). Insert the stack height adjustment tool (see Figure 7) in below the shaft collar and let the shaft collar rest on it. PVM(X)33 and larger: Pick up the shaft (if necessary, temporarily reinstall the coupling to provide a grip to lift by) and insert the stack height adjustment tool (see Figure 7) below the shaft collar. Let the shaft collar rest on it.

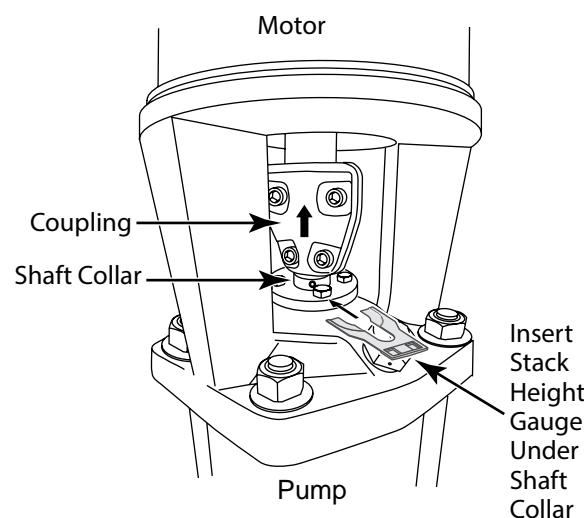

Figure 7 - Using the stack height adjusting tool

13. Reinstall the coupling (43) on the pump and motor shaft. If the pump has a shaft pin, the pin axially locates the pump shaft. If the pump does not have a shaft pin, then set the coupling so that it grips equal lengths of the pump and motor shaft.
14. Tighten the coupling's socket head cap screws (73). **NOTICE:** Torque settings are critical to prevent coupling movement. If the coupling is not tightened to the correct torque, it could slip on the shaft and overheat and damage both the coupling and the shaft. Refer to Table III, for torque specifications. Be sure to tighten the two halves of the coupling evenly (see Figure 8).
15. Remove the stack height adjustment tool and clip it to one of the coupling guards.
16. Rotate the shaft to make sure that there is no interference. After assembly there should be a small gap between the shaft collar and the bracket. If anything rubs, repeat Steps 13, 14, and 15 to readjust pump shaft height.
17. Reinstall the coupling guards.
NOTICE: The guards should be in place before the unit is run.
18. Open the suction and discharge valves. Turn the power back on.

Replacing Mechanical Seal

1. Follow Steps 1-7 under Motor Replacement and then proceed with Step 2 below.
2. Loosen the three set screws in the shaft collar above the mechanical seal and remove the shaft collar.
3. Remove the four retaining bolts (69) that hold down the seal flange and seal.
4. Use a flat screwdriver to pry up the seal flange. Remove the top portion of the seal.
5. Using the three round holes on the top of the shaft sleeve, or notch in flange (see Figure 9), remove the remaining portions of the seal.
6. Clean the seal seat area with a wetted cloth.
NOTICE: Be sure that you do not scratch, chip, or scar the seal face. Be sure that the seal face is clean before finishing assembly.
7. Wipe a small amount of water onto the O-Ring on the inside of the new seal.

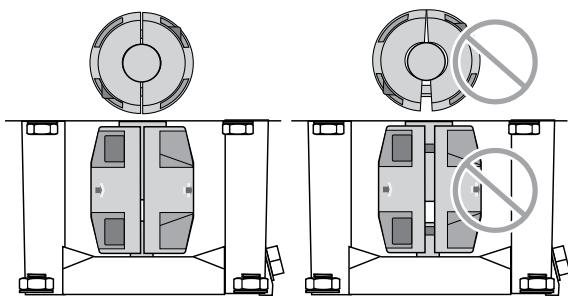

Figure 8 - Make Sure that the coupling halves are evenly tightened

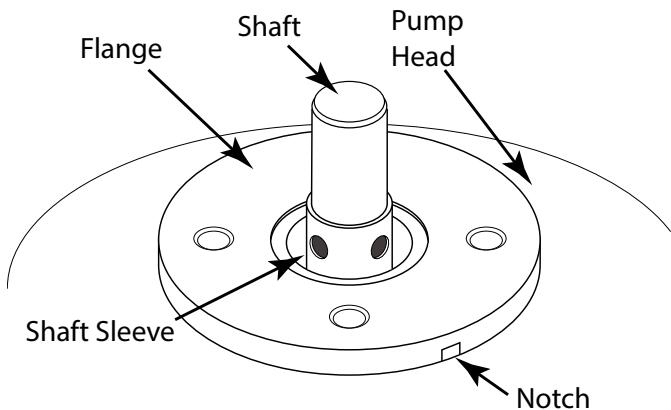

Figure 9

8. Slide the new seal assembly onto the shaft as a single unit.
9. Install the four retaining bolts in the seal flange and tighten them to 3.0 ft-lbs. (4.0 Nm).
10. Follow Steps 8 through 19 under Motor Replacement to reinstall the motor.

Replacing Pump Stack

The reference numbers [shown as (11) or (88)] refer to the exploded views, Figures 10-13. See the appropriate exploded view for your model series.

1. Follow Steps 1-7 under Motor Replacement, then proceed with Step 2 below.
2. Remove the motor bracket adapter plate (50), if your pump has one.
3. Follow Steps 2-5 under Mechanical Seal Replacement and then proceed with Step 3 below.
4. Remove the staybolt nuts (77) and flatwashers (78) from the staybolts (81). Use vicegrips, if necessary, to prevent the staybolts from unscrewing out of the pump base.
NOTICE: It is not necessary to remove the staybolts when replacing the stack.
5. With the base firmly attached to a solid floor, pull the motor stool (36) or motor stool/pump head assembly (36/53 or 36/56) straight up off the staybolts.
6. Make a note of the orientation of any tabs in the top of the stack assembly, then remove the stack assembly by pulling it straight up.
7. Install the new stack assembly, making sure that the orientation of the tabs matches the orientation of the tabs on the old stack assembly.
8. Replace the stack sleeve O-Ring (82) located in the motor stool (36/53) or pump head (36/56). Make sure that the new O-Ring is evenly seated in the O-Ring groove in the motor stool or pump head.
9. Apply water to the stack sleeve O-Ring in the motor stool/pump head (82) and to the top of the stack sleeve (48).

10. PVM1–PVM20: Slide the motor stool (36) over the staybolts (81) and onto the sleeve (48). Slide the pump head (36) over the staybolts onto the stack sleeve (48). Be sure the stack sleeve O-ring seats in the pump head. Add the staybolt nuts and washers (77,78) and tighten them to torque specifications listed in Table III.

PVM(X)1-20: Mount the pump head (56) on the stack sleeve (48). Be sure the stack sleeve O-ring (82) seats in the groove in the pump head. Follow it with the motor stool (36) which goes over the staybolts (81) and seats on the pump head. Slide the pump head (36) over the staybolts onto the stack sleeve (48). Be sure the stack sleeve O-ring seats in the pump head. Add the staybolt nuts and washers (77,78) and tighten them to torque specifications listed in Table III.

PVM/PVM(X)33: Slide the pump head (36) over the staybolts onto the stack sleeve (48). Be sure the stack sleeve O-ring seats in the pump head. Add the staybolt nuts and washers (77,78) and tighten them to torque specifications listed in Table III. Place the motor stool (53) on the pump head and fasten it with four pump head bolts (74A). Tighten the pump head bolts to torque specifications given in Table III.

11. Make sure that the stack can rotate freely.

12. Follow Steps 6–10 under Mechanical Seal Replacement.

13. Follow Steps 11–19 under Motor Replacement to reinstall the motor.

WARNING Risk of explosion and scalding. Do not run pump with discharge valve closed; the water in the pump may boil, causing risk of explosion and steam burns to anyone nearby.

Frequency of Starts and Stops

Check pump cycling frequency and make sure that the pump starts per hour do not exceed the motor manufacturer's specification.

Frost Protection

- If you do not use your pump during seasons of frost, drain it and add a glycol based antifreeze (50/50 mixture) to avoid damage.

CAUTION Risk of flooding. Can cause personal injury and/or property damage. Watch the direction of the priming plug and make sure that liquid escaping from it does not injure persons nearby or damage the motor or other components. In hot water installations, pay particular attention to the risk of injury from scalding hot water.

- Upon restart dispose of spent antifreeze properly.
- Do not replace the drain plug or tighten the priming plug until you put the pump back in service again.

Table III – Torque Specifications (ft-lbs.) For Cast Iron and Stainless Steel Models

Description	Type of Fastener	Item No.	Size	Torque (Nm)	Torque (ft-lbs)	Flow Series
Shaft Collar Set Screw	Set Screw	none	M5	2.5	1.8	All

Collet Locknut	Hex nut	22	M30	100.0	73.8	PVM33

Regular Maintenance Checks

The following checks should be made at regular intervals:

1. The pump meets required performance and is operating smoothly and quietly.
2. There are no leaks.
3. The motor is not overheating.
4. Remove and clean all strainers and filters in the system.
5. Verify amp draw – check motor amperage.
6. Pump wear rings and shaft require no regular maintenance.

TROUBLESHOOTING

WARNING Risk of electrical shock and possible unexpected starts. Disconnect all power to the pump before servicing or working on pump. Make sure that power is locked out and that pump cannot be accidentally started.

Problem	Cause
1. Motor does not run when started	A. Power failure B. Fuses blown C. Motor starter overload has tripped out D. Main contacts in motor starter are not making contact or the coil is faulty E. Control circuit fuses are defective F. Motor is defective
2. Motor starter overload trips out immediately when power supply is switched on	A. One fuse has blown B. Contacts in motor overload relay are faulty C. Cable connections are loose or faulty D. Motor winding is defective E. Pump mechanically blocked F. Overload setting is too low
3. Motor starter overload trips out occasionally	A. Overload setting is too low B. Low voltage at peak times
4. Motor starter has not tripped out but the motor does not run	A. Check 1 A), B), D,) and E)
5. Pump capacity is not constant	A. Pump inlet pressure is too low B. Suction pipe/pump partly blocked C. Pump is sucking air
6. Pump runs but gives no water	A. Suction pipe/pump blocked B. Foot or non-return valve is blocked in closed position C. Leakage in suction pipe D. Air in suction pipe or pump E. Motor rotates in the wrong direction
7. Pump runs backwards when switched off	A. Leakage in suction pipe B. Foot or non-return valve is defective C. Foot valve is blocked in open or partly open position D. Non return valve leaks or is blocked in open or partly open position E. Discharge valve is defective
8. Leakage from shaft seal	A. Pump shaft position is incorrect B. Shaft seal is defective
9. Noise	A. Cavitation is occurring in the pump B. Pump does not rotate freely (That is, there is increased frictional resistance) because of incorrect shaft position

WARRANTY

Seller warrants equipment (and its component parts) of its own manufacture against defects in materials and workmanship under normal use and service for one (1) year from the date of installation or start-up, or for eighteen (18) months after the date of shipment, whichever occurs first. Seller does not warrant accessories or components that are not manufactured by Seller; however, to the extent possible, Seller agrees to assign to Buyer its rights under the original manufacturer's warranty, without recourse to Seller. Buyer must give Seller notice in writing of any alleged defect covered by this warranty (together with all identifying details, including the serial number, the type of equipment, and the date of purchase) within thirty (30) days of the discovery of such defect during the warranty period. No claim made more than 30 days after the expiration of the warranty period shall be valid. Guarantees of performance and warranties are based on the use of original equipment manufactured (OEM) replacement parts. Seller assumes no responsibility or liability if alterations, non-authorized design modifications and/or non-OEM replacement parts are incorporated. If requested by Seller, any equipment (or its component parts) must be promptly returned to Seller prior to any attempted repair, or sent to an authorized service station designated by Seller, and Buyer shall prepay all shipping expenses. Seller shall not be liable for any loss or damage to goods in transit, nor will any warranty claim be valid unless the returned goods are received intact and undamaged as a result of shipment. Repaired or replaced material returned to customer will be shipped F.O.B., Seller's factory. Seller will not give Buyer credit for parts or equipment returned to Seller, and will not accept delivery of any such parts or equipment, unless Buyer has obtained Seller's approval in writing. The warranty extends to repaired or replaced parts of Seller's manufacture for ninety (90) days or for the remainder of the original warranty period applicable to the equipment or parts being repaired or replaced, whichever is greater. This warranty applies to the repaired or replaced part and is not extended to the product or any other component of the product being repaired. Repair parts of its own manufacture sold after the original warranty period are warranted for a period of one (1) year from shipment against defects in materials and workmanship under normal use and service. This warranty applies to the replacement part only and is not extended to the product or any other component of the product being repaired. Seller may substitute new equipment or improve part(s) of any equipment judged defective without further liability. All repairs or services performed by Seller, which are not covered by this warranty, will be charged in accordance with Seller's standard prices then in effect.

THIS WARRANTY IS THE SOLE WARRANTY OF SELLER AND SELLER HEREBY EXPRESSLY DISCLAIMS AND BUYER WAIVES ALL OTHER WARRANTIES EXPRESSED, IMPLIED IN LAW OR IMPLIED IN FACT, INCLUDING ANY WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Seller's sole obligation under this warranty shall be, at its option, to repair or replace any equipment (or its component parts) which has a defect covered by this warranty, or to refund the purchase price of such equipment or part. Under the terms of this warranty, Seller shall not be liable for (a) consequential, collateral, special or liquidated losses or damages; (b) equipment conditions caused by normal wear and tear, abnormal conditions of use, accident, neglect, or misuse of said equipment; (c) the expense of, and loss or damage caused by, repairs or alterations made by anyone other than the Seller; (d) damage caused by abrasive materials, chemicals, scale deposits, corrosion, lightning, improper voltage, mishandling, or other similar conditions; (e) any loss, damage, or expense relating to or resulting from installation, removal or reinstallation of equipment; (f) any labor costs or charges incurred in repairing or replacing defective equipment or parts, including the cost of reinstalling parts that are repaired or replaced by Seller; (g) any expense of shipment of equipment or repaired or replacement parts; or (h) any other loss, damage or expense of any nature.

The above warranty shall not apply to any equipment which may be separately covered by any alternate or special warranties.

PERFORMANCE: In the absence of Certified Pump Performance Tests, equipment performance is not warranted or guaranteed. Performance curves and other information submitted to Buyer are approximate and no warranty or guarantee shall be deemed to arise as a result of such submittal. All testing shall be done in accordance with Seller's standard policy under Hydraulic Institute procedures.

LIABILITY LIMITATIONS: Under no circumstances shall the Seller have any liability under the Order or otherwise for liquidated damages or for collateral, consequential or special damages or for loss of profits, or for actual losses or for loss of production or progress of construction, regardless of the cause of such damages or losses. In any event, Seller's aggregate total liability under the Order or otherwise shall not exceed the contract price.

ACTS OF GOD: Seller shall in no event be liable for delays in delivery of the equipment or other failures to perform caused by fires, acts of God, strikes, labor difficulties, acts of governmental or military authorities, delays in transportation or procuring materials, or causes of any kind beyond Seller's control.

COMPLIANCE WITH LAW: Seller agrees to comply with all United States laws and regulations applicable to the manufacturing of the subject equipment. Such compliance shall include: The Fair Labor Standards Act of 1938, as amended; Equal Employment Opportunity clauses of Executive Order 11246, as amended; Occupational Safety and Health Act of 1970 and the standards promulgated thereunder, if applicable. Since compliance with the various Federal, State, and Local laws and regulations concerning occupational health and safety, pollution or local codes are affected by the use, installation and operation of the equipment and other matters over which Seller has no control, Seller assumes no responsibility for compliance with those laws and regulations, whether by way of indemnity, warranty, or otherwise. It is incumbent upon the Buyer to specify equipment which complies with local codes and ordinances.
